

FC5: can't mount JFS LVG

Source: <http://linux.derkeiler.com/Mailing-Lists/Fedora/2006-05/msg05244.html>

Hey,

I installed FC5 last night using "linux jfs" at the boot prompt, set up my partitions but retained my old FC4 jfs LVG, and now the volume won't mount:

```
# mount -t jfs /dev/mapper/MediaGroup-Media /Video
mount: wrong fs type, bad option, bad superblock on /dev/mapper/ MediaGroup-Media,
missing codepage or other error
In some cases useful info is found in syslog - try
dmesg | tail or so
```

No oopsie in dmesg or messages, what gives? I didn't touch the original volume group when playing with the partitions either.

Its worth noting that when I specified a mount path in DiskDruid on install, the installation failed because the install was unable to mount the LVG due to an "invalid argument" after formatting the other partitions.

Thanks,

Ben
