-

I have a new FC5 system with two printer (parallel Epson C70 and USB Samsung ML-1610) that work great.

Now I want to share both of them with another FC5 laptop.

I followed the procedure but I can't get the test page from remote machine (that is used also on another network and can share printers).

I used the printer configuration tool, I told to share printers to All using CUPS (IPP).

Where shall I start investigation???

Any help will be appreciated.....please note that it is not depending on iptables as I didn't succeed even when iptables was stopped.

And what about hosts.allow and host.deny???
