

the safety of gnupg

Source: <http://linux.derkeiler.com/Mailing-Lists/Fedora/2006-05/msg05334.html>

I've just been reading some rather silly things about gnupg except for one practical point: Who has actually checked the source code for it to see whether it's trustworthy, etc?

And, of course, the next thing would be: Who would they be that we could trust them, too? After a bit of Googling around, I'm darned if I can find out, nor think of the right terms to search for.

Naturally, this extends to other open-source programs. Which ones do get vetted?

—
(Currently running FC4, occasionally trying FC5.)

Don't send private replies to my address, the mailbox is ignored.
I read messages from the public lists.
