Hey all!

I've given a try to the timer applet (1.2, FC5/GNOME). Does anyone know a similar GNOME applet for reminders/alarms? The timer applet only does countdowns, and I'd like to set similar alarms at fixed date/time for instance.

I'm pretty sure that kalarm and ktimer will run in gnome.

Hm ktimer is exactly the same as the gnome timer applet (not what I want so), but kalarm, which sounds interesting to me, unfortunately doesn't show in the gnome panel: he daemon runs, kalarm when launched manually and alarms raise, but even w/ `--tray` it doesn't show in panel.

Thanks anyway!

Regards,
