Not sure what the difference is between "/dev/tty0" and "/dev/ttyS0"...

/dev/ttyS0 is a serial port. /dev/tty0 is the active virtual console. /dev/tty0 has special meaning that way. /dev/tty1 and above correspond to virtual console 1 and above. You may also have /dev/ttyUSBx for USB serial devices. Not that this helps with the original problem, but you did ask.

Mikkel
