William Steibel wrote:

Having problems with samba, I foolishly edited the fstab file. Of course fedora 5 will no longer boot. I have used knoppix and the fc5 rescue disk to get into the system and edit the fstab file back to the original. In each method I run into the same problem. I cannot edit the file because it is a read only file. All attempts to save the edited file fails. I am a linux novice,so excuse my stupidity. I appreciate the solution to this problem

My guess is that you didn't "su" when using knoppix. You're probably not root when you tried to edit the files.
