This is the tutorial about running PHP scripts from command line. I think you can use it and schedule the job via cron then.

Hi All,

I have PHP/CGI Perl script for generating PDF Report via web.

But I want to schedule it via cron to deliver to all subscribers their account's PDF Report (mass emailing). The total subscribers are about 10,000. How can I do that ? What requirements do I have to had ? Is there any web resources that can guide me to achieve that ?
