- 

I know this might be a rhetorical question but has anyone found a way to speed up Java in VMWare 5.5 with FC3? All my C++ code runs at near native speed (after the first execution) but Java, well, Java is a different story; it's just slow -- like 10x slower than running on native hardware.

Using VMWare 5.5 with 512MB allocated to the VM.

Any ideas?

:b!
