I understand how the krb5 provides login authentication. I can't understand where the user account information is obtained during the login process. If users don't have accounts on local pc's, how does this work?

I've put together a howto on Authentication of FC5 boxes to Active Directory, take a look if you are interested:

http://cb-net.co.uk/readarticle.php?article_id=5

This will also work with FC4. Any questions, please register and ask :)

Many thanks,

-Chris Bradford
