My Intel Pro Wireless 2200BG required the latest firmware drivers to be installed. (<http://www.ces.clemson.edu/linux/fc2-ipw2200.shtml>).

Just follow the instructions, reboot and it will be working...

Note: You may not see the wireless indicator lit, but as soon as you connect through Network Manager, it will light-up...

Note that the initscripts update referred to on that page is still in updates-testing, not yet in updates. Hopefully that will change soon.
