

Apple wireless BT keyboard: how to enable those special keys?

Source: <http://linux.derkeiler.com/Mailing-Lists/Fedora/2006-07/msg04114.html>

The Apple bluetooth keyboard works just beautifully with Fedora and the hidd daemon. Most keys work but unfortunately some of the special keys don't even seem to emit a key code (tested with xev).

The keys F13–F16 and Volume up, Volume down, mute and eject do not work. I modified the XkbModel in xorg.conf to "power_g5" and tried xmodmap as suggested on the net but no go.

Any idea how can I enable those extra keys?

Thanks,
Jurgen
