Evolution 2.7.4 exchange connector is very, very slow. It take over 20 minutes to connect and download messages. The console I started it in does not give much to help solve the problem. Is this an inherent problem with Evol. 2.7.4?

--

>Jamie Bohr Hi Jamie, Evo's 2.6.2 onwards have had this behaviour for me, with the exception that 2.6.2 times out and fails to connect. It seems to be downloading everything on the server – check your disk space usage. Have you tried a previous version? I have bugzillaed this, but am not up to fixing it.. Bill
