hi...

i've kind of setup nfs... but i have some questions/issues.

1) how do i allow the nfs on the client to always be active. currently i've had to do a "mount 192...:/foo/data /data" to be able to share the drive.. i know there's a way to setup the system to have the nfs always setup on boot-up.

2) i add a file to the shared dir from the nfs system. i try to edit it from a client, and i can't. as a client, i can copy the file to my local dir, and edit it.. but as a client, i can't overwrite the file on the nfs share.

any pointers/thoughts would be helpful... i'm missing something in the docs that i've bben looking at.

thanks

-bruce
