Thanks, Joachim. I have just done that, but it is strange that as a normal user, the quality of the image looks fine, but when I run a graphical program as root, I get a bad quality image. A screenshot is at:

http://phhs80.googlepages.com/graphics_card.png

Any further ideas?

In addition, there is something strange going on when I move the cursor with the arrow keys inside a new message window in Thunderbird. A screenshot is at:

<http://phhs80.googlepages.com/tb.png>

Can you see the track left by having moved the cursor? Is there a solution for that?

Paul
