From: "Bruno Wolff III" <bruno@xxxxxxxx>

I was supposed to have 30 seconds of time tonight, but whenever I enter the coordinates and submit the request I get the message "Unable to schedule target". I am pretty sure the target should have been visible for at least another hour at the time I tried this.

The coordinates I was using are:

38:53:55.133N 77:02:15.691W

Should I bugzilla this?

No – the historical artifact protection lock mark III is engaged.

{^_^}
