I installed Fedora Core 5 last night, and I can't get Flash player to work with Firefox or Mozilla. I've tried installing it in Firefox with both Firefox's built in installer and by the command line installer provided by macromedia (well, adobe now). Also installed manually using the copy command like it recommends on the mozdev website. It ain't workin'. Can anybody help me?

Thanks,

Russell Golden

Sure! Try this page:

http://www.adobe.com/shockwave/download/download.cgi?P1_Prod_Version=ShockwaveFlash&promoid=BIOW

In step 5 ignore their suggestion about the menu item help-->AboutPlugins and type 'about:blugins' in the location bar instead if you don't see the flash player listed, you could try again, after disabling selinux before installing it (don't know if this is still a problem or not, but it costs little to try.)

Scott
