At 04:07 31/08/2006, you wrote:

I was supposed to have 30 seconds of time tonight, but whenever I enter the coordinates and submit the request I get the message "Unable to schedule target". I am pretty sure the target should have been visible for at least another hour at the time I tried this.

The coordinates I was using are:

38:53:55.133N 77:02:15.691W

Should I bugzilla this?

What datum are you using with these coordinates?
