Hello all,

I'm pretty sure I've seen some informations about this here, but couldn't cast a correct search to bring any result when looking the archives.

The point is: how to start gnome-panel properly when using Window Maker as the default windowmanager? I tried to start gnome-panel to get both gnome-panel, gconfd, nautilus and other gnome-things but it seems that dbus something is missing (and maybe more?).

Any hint?

Regards,
