

Nautilus cannot display windows network?

Source: <http://linux.derkeiler.com/Mailing-Lists/Fedora/2006-08/msg04264.html>

-

I have a network of 5 computers which has been working fine until recently. I have one FC5 box setup as a samba server, and there are 4 other boxes using Windows XP or 98.

Findsmb displays all the computers on the network, and the windows machines can access the shared files/folders, and can print through the FC box, but when I try to browse the network in Gnome, be it through "places>Network Servers>Windows Network>workgroup, or through the other gnome network tools, I get the following message:

The folder contents could not be displayed.

Sorry, couldn't display all the contents of "Windows Network: workgroup".

Somehow one of the system updates in the last few days, has mangled things, and I am at a loss as to how to troubleshoot it. I have tried google, but so far haven't been able to find anything relevant.

I can ping the various boxes, but for some reason Nautilus cannot view them. I have the same trouble as user and as root.

Any troubleshooting suggestions would be greatly appreciated.

cheers, Paul - VA7NT - email: va7nt@xxxxxxxxxx
