Hi... My company have just bought a few domain name like mycompany.uk , mycompany.hk and mycompany.jp and etc. I have point those domain IP to the web server public IP and my webserver has the virtual host of <http://mycompany.com> and it is running apache.

I want to redirect those domain URL for example <http://mycompany.uk> to <http://mycompany.com> when the web traffic reach my webserver. So that at the user web browser will show <http://mycompany.com> whenever they type <http://mycompany.uk> and <http://mycompany.hk> and etc

I found a redirect directives that it works for the following

Redirect /abc <http://mycompany.com>

It means if I type <http://mycompany.com/abc> , the web browser will redirect to <http://mycompany.com>

but if I put

Redirect <http://mycompany.uk> <http://mycompany.com>

it doesn't work at all

Do You Yahoo!?
