Last time I tried installing <<http://claws.sylpheed.org/downloads.php>> from the devel yum repo, it screwed up X windows.

I've downloaded the RPM from <<http://download.fedora.redhat.com/pub/fedora/linux/extras/development/i386/>> and plan to do a local install via yum of this RPM. Is this the safest way to install risky packages?

thanks,

Thufir
