Around 03:52pm on Tuesday, September 12, 2006 (UK time), Paul Howarth scrawled:

I think what you're looking for is:

```
$ echo hello | Mail -s test john.black@xxxxxxxxxxx
```

i.e. replace "sendmail" with "Mail" (note the upper case M).

Mail is soft linked to mail, so the upper case M makes no difference.

So it is. I've always used "Mail" as a habit; it must have been different from "mail" on some system I used in the past, SunOS 4 perhaps.

Paul.
