Greetings All,

I have installed FC6 on my home network and am enjoying the new release. Tip of my fedora to the developers.. Job well done!

What is the status of using NFSv4 with SELinux and firewall enabled? I have tried to get it going over my home network but to no avail without disabling SELinux and the firewall. Is this problem strictly a NFS issue? Has anyone been able to use NFS with SELinux and firewall enabled?

Take a gander at the how-to at http://www.lowth.com/LinWiz/nfs_help.html

You may also find

<http://www.ba.infn.it/calcolo/documenti/NFSserver.html#Firewall>
useful. I used it to do my setup. However, I do not use selinux, so cannot speak to that.
