the internet connection is working fine – firefox and other computers  
access the internet ok, on all levels.  
firefox is working fine, web mail is all i can use

Can you please check you connection–settings in Firefox?  
If there is 'direct Connection' checked the internet should also work  
from other programms like ping.  
If you are using a proxy to connect to the internet from a local network  
it is absolute consequentially that you don't have a direct connection  
to access a imap–server for example.  
Otherwise please check you general internet settings.  
'system–config–network'. Maybe there is no DNS–Server, so that you only  
can reach websites whichs IP–Adress is cached.  
Did you try to ping an IP–Address directly?

Guido

—

Do not write to this address directly. Mails which are not sent to a  
list will be dropped automatically.
