Following the instructions in <http://wiki.services.openoffice.org/wiki/Font-FAQ> I am trying to add fonts to be globally available. I have created a folder and put my new fonts there. It then says I should create a text file called /usr/share/X11/fonts/local.conf, with the new folder added in the format

```
<dir> /usr/share/X11/fonts/NewFonts </dir>
```

However, when I run 'fc-cache /usr/share/X11/fonts/NewFonts' I get the error

Fontconfig error: "local.conf", line 2: junk after document element

I have checked that there is no space or newline character after the line. What is wrong, please?

Anne
