Okay,
I've
had
this
problem
for
a
while
and
I'm
beginning
to
wonder
why.

Re: firefox slow rendering (e.g. wikipedia)

Firefox
sometimes
responds
very
slowly,
especially
when
rendering
Wikipedia
and
a
few
other
pages
(mostly
wikis
actually).
I
don't
mean
connecting
to
the
internet,
I
mean
responding
to
the
user;
e.g.
I
run
a
mouse
gestures
extension
which
can
become
unusable
with
a
couple
of
Wikipedia
tabs
open.
Booting
the
same

Re: firefox slow rendering (e.g. wikipedia)

machine
into
Windows
Me
and
running
Firefox
I
don't
have
this
problem.
System
is
FC5,
Athlon
1.3GHz,
1GB
RAM,
GeForce
3
Ti200
with
Nvidia
drivers.

So:
Does
anyone
else
have
this
problem?

I have. Any
site
javascript
intensive
makes FF
consume
100% CPU
for a
few seconds
at each
click. Gmail
is one of
them.

So, how bout installing the
noscript extension &
enabling javascript for

Re: firefox slow rendering (e.g. wikipedia)

sites where it is absolutely
necessary?

You are a genius. What a wonderful
solution. I each site i just go to
Edit -> Preferences -> Content -> Enable
JavaScript. And then wait for
each click or page scroll. I have a better one:
Why not just use Opera
in instead of FF? This one is much better: If
you have nothing worth
to say why don't you just shut up?

Or, alternatively, why don't you bite the hand that helps you?
<https://addons.mozilla.org/firefox/722/>

Could you elaborate on how that fixes FF slowness on javaScript sites?
To make it clear: I need Gmail *with* javaScript enabled. Blocking
javaScript is not a solution when javaScript is necessary or just nice
to have.

I suggest you go to the link Scott provided you & read the documentation
for that extension for yourself. If it's still unclear, there's a link
to the authors site. His site will tell you anything you want to know
regarding the noscript extension ;-) Plus, you can email him.

I'd agree Clodoaldo's response wasn't really necessary,
however he's right that the JavaScript heavy sites tend
to be ones like Gmail that need it. I'm also not really
happy with use Konqueror/Opera/A Mac type answers because
I know FF on the same machine under windows works fine,
and I doubt that it's windows causing the difference.

I've just tried the binary version of 1.5.0.8 from
Mozilla and it won't run (seemingly library problems),
maybe I'll give 2.0 a go.
