"corrupted orphan linked list" on my home filesystem

Source: <http://linux.derkeiler.com/Mailing-Lists/Fedora/2006-12/msg04243.html>

-

for the second time in a few days, my /home filesystem (/dev/fc5/home, the name being a holdover when i was running FC5 under LVM2 on this system) magically reverted to "read-only" status, forcing me to reboot, at which point i was told:

"Inodes that were part of a corrupted orphan linked list were found."

requiring e2fsck to fix all sorts of apparent corruption.

once is a bit weird, twice is a definite pattern. has anyone else seen this lately? kernel is 2.6.18-1.2868.fc6.

rday

p.s. the "mount" command insisted that the filesystem was still mounted "rw", and trying a "remount" had no effect.
