Can someone give me the proper command to retrieve images from a camera using gphoto2?

I used it casually once before to see that it worked and now that I have a few pictures I want it refuses to give me an image.

It will provide .ppm and .raw files apparently but the only ones that do anything are the .ppm and all I get is some colored lines? I've gone through man pages and whatever else I can find but I am not sure I'm using the correct command to download the images from the camera.

Thanks.

Bob Goodwin

What do you see when you issue the command:

```
gphoto2 -L
```

If you see the list of files on the camera, you can get a file:

```
gphoto2 --get-file 1 (to get file #1)
gphoto2 -P (to get all files)
```

I am having some problem with the latest version of gphoto2 (both FC5 and FC6), so I rolled back to an earlier version.
