Dear All,

Just cut out from the log records :
Feb 14 04:04:19 svr1 init: Trying to re-exec init
Feb 14 07:48:13 svr1 /sbin/mingetty[1927]: tty1: invalid character
0x1b in login name

Gee, a 0x1b is an escape character, and no, it's not a legal username character.

- How to prevent the problem again ?
- 1, Disable the auto function (re-exec init).
 - 2, About the mingetty program.

You sure you didn't hit "F1" or some other escape key sequence on the TTY involved?

Re: System log from FC6

Yes,
So... How to fix the problem ?

Edward.
