François Patte writes:

I have a problem with scim keyboard: the default keyboard is European/French and whenever I do not use scim for another language, there is no problem \*but\* if I switch on scim to use another input language the keyboard falls back to an english keyboard...

example: I use my default French keyboard and when I press the "a" key I get the letter "a" on my screen.

Suppose that I switch to hindu keyboard, and select itrans input, when I press the "a" key I get a "q" character (in hindi) on my screen.... So, if I want the hindi letter "a", I need to press the "q" key of my keyboard... If I want the hindi "m" letter, I need to press the ",," of my keyboard! And so on.

What's wrong? this did not happen uner fc4! I run now fc6.

I think this is a scim-m17n bug. Though it may not be easy to fix since the desired behaviour may depend on the map you want to use: ie perhaps for itrans and phonetic maps one may want to keep "a" on the A key but for some maps it may be more desirable to preserve the layout geometry as far as possible rather than the key map.

Some fix a bit related to this went into scim-0.2.1-1.fc6 but it may not be completely fixed yet.

Please file a bug in bugzilla under scim-m17n and we will try to look into it in more detail.

Thanks, Jens
