All of my FC DVDs have been written with:

```
growisofs -dvd-compat -Z /dev/dvd=/path/to/dvd.iso
```

with nary a glitch (no need for read ahead padding, nada). Burned on multiple machines with different DVD writers, readers, etc.

Same here, along with right-clicking on an ISO in Nautilus, and burning from there. Worked fine, including the media check. I'm using Verbatim DVD+R discs. I've found their discs to be the best that I can buy, here. Much of the discs in the local shops are utter crap. And + discs are supposed to have some advantages over - ones, though that does depend on the drive making use of the features.

(This box runs FC6, my others run FC4 & FC5, in case that's important to the thread.)

Don't send private replies to my address, the mailbox is ignored. I read messages from the public lists.
