After the latest kmail update (kdepim-3.5.7-3.fc7) I have 2 things which no longer work:

(i) filters – set to run on 1 inbox (exchange imap) and move to several folders on a different imap server.

They no longer get run.

(ii) it no longer is able to expand addresses from the corporate ldap server.

sigh ... i really need a reliable functioning email program ...
