Understood – I tried mp32ogg but it complained about not having the perl-base.

That sounds like a packaging issue. Did you try installing it from some other distro's package or something? Or perhaps we're not talking about the same mp32ogg? I'm referring to

<ftp://ftp.faceprint.com/pub/software/scripts/mp32ogg>

I've never used the script myself, but it looks like the required perl modules for it are all in Fedora. You'd just need mpg123 from somewhere else.
