Understood – I tried mp32ogg but it complained about not having the perl-base.

That sounds like a packaging issue. Did you try installing it from some other distro's package or something? Or perhaps we're not talking about the same mp32ogg? I'm referring to

<ftp://ftp.faceprint.com/pub/software/scripts/mp32ogg>

I've never used the script myself, but it looks like the required perl modules for it are all in Fedora. You'd just need mpg123 from somewhere else.

Indeed Todd, we are talking of the same script. Here's a small snippet of the errors:

```
Can't locate MP3/Info.pm in @INC (@INC
contains: /usr/lib/perl5/site_perl/5.8.8/i386-linux-thread-multi
/usr/lib/perl5/site_perl/5.8.7/i386-linux-thread-multi
Etc, etc, etc.
```

It's Ok though, I figure I may just need some other missing perl modules. For the dozen or so MP3's I do have, it's really not worth going through any extra effort.
