I was trying to use vlc to play some video DVDs. It worked on two of them but failed on two. All of them were commercial DVDs. I remember someone previously stated a rule for which DVDs vlc will not play. Could someone restate the rule?

I could not find any other application to play them either. Is there such an application?

Have you installed libdvcss2, which is needed for decrypting some dvd's.

Mplayer includes it in the package, but vlc, xine, and ogle, etc, all need it.

Freshrpms, or Livna to get it.

Nigel.

I can't find libdvcss2 on livna. Is it possible it is only on freshrpms?

Possibly, but libdvcss2 is the debian version. An error on my part. Try just libdvcss.

Re: A vlc question

I've just put vlc on an instance of FC5, and freshrpms is showing libdvdcss , which I installed, and I've got vlc playing DVD's ok on that.

Livna probably has it too, but I havn't got anything booted up thats using the Livna repo at the moment.

Sorry for the error.

Nigel.

Thanks, I found it on freshrpms and it works.
