Hiya folks –

Is there an applet that allows me see a list of devices that are currently using the DHCP server?

Umm, as far as I remember everything is logged into the /var/log/messages, isn't it?

I mean:

IP address of the client machine

MAC address of the client machine

Name of the client machine

Beginning and ending of ipaddress lease time

Cheers

Yes – you are correct. I was hoping for a graphic interface as I have 36 subnets I wish to add and keep an eye on at any one moment. Much like the way (Ehmmm) MS does it.
