Hi everyone,

I have a box running fedora core 2. I cannot set the display back to this box when I'm on another machine.

Here is what

I type:

```
berry:/home/paula: xhost +  
then I open up a terminal and ssh to another machine. When I get to the other machine, I type,  
straws:/home/paula: setenv DISPLAY berry:0.0  
permission denied
```

and it does not work. There is no selinux or firewalls up, so it isn't a security issue. Does someone know something about this? I don't have this trouble on any of my other boxes.

Many thanks,

Paula
