Alas the LABEL problems and many others kept me busy doing  
  
stupid things.

You really like to discourage people from attempting to help you with the above comment.

No the stupid things were of my own doing. Not setting the bios properly, operating from the new hard drive when I thought I was on the old hard drive. I didn't know two sets of the same LABEL will load up odd.

Anyway, last posting giving you stupid things to try. You got it altogether and need no replies to your queries.

That is not the case. I learned dd is a way to do this from this list and I am trying to make it work. Lots of help has I hope made this happen.

This time I know much more 8-)

And it is from my experience and that of the people on this list.

I hope so.  
Jim
