The latest cyrus-imap packages:

Aug 31 06:59:14 Updated: cyrus-imapd-perl.i386 2.3.9-6.fc6
Aug 31 06:59:15 Updated: cyrus-imapd-utils.i386 2.3.9-6.fc6
Aug 31 06:59:59 Updated: cyrus-imapd.i386 2.3.9-6.fc6

No longer allow me to login with plaintext, only SSL. From telnet localhost 143:

Version 2.3.9-6.fc6:

telnet localhost 143

Trying 127.0.0.1...

Connected to localhost.localdomain (127.0.0.1).

Escape character is '^'.

```
* OK [CAPABILITY IMAP4 IMAP4rev1 LITERAL+ ID STARTTLS LOGINDISABLED]
tweedy.ksc.nasa.gov Cyrus IMAP4 v2.3.9-Fedora-RPM-2.3.9-6.fc6 server ready
^^^^^^^^^^^^^^^^
```

The previous version (2.3.8-3.fc6) did not have this issue:

```
cyrus-imapd-2.3.8-3.fc6
cyrus-imapd-utils-2.3.8-3.fc6
cyrus-imapd-perl-2.3.8-3.fc6
```

telnet localhost 143

Trying 127.0.0.1...

Connected to localhost.localdomain (127.0.0.1).

Escape character is '^'.

```
* OK [CAPABILITY IMAP4 IMAP4rev1 LITERAL+ ID STARTTLS] littlenail.homelinux.net Cyrus
IMAP4 v2.3.8-Fedora-RPM-2.3.8-3.fc6 server ready
```

Cyrus IMAP LOGINDISABLED

Is this a feature or a bug? I did not see anything in Bugzilla. For the time being I've rolled back tot the 2.3.8.

Bob...
