Hi All,

I tried to setup netdump on my FC6 machine but I could not find netdump module (netdump.ko) in the build. I assume netdump comes by default with rhel/fedora kernels. Where do I get the rpms/srpms/patches to build netdump from on FC6. Or which kernels support netdump?

Try "yum install diskdumputils netdump netdump-server kernel-kdump"
