I also have php-5.2.4-1.fc7 and others. They were noticed by 'fedora package updater'.
But now there are no php-5.2.4-1.fc7 and others on f7 update repos.

I have also this problem.

<http://linux.derkeiler.com/Mailing-Lists/Fedora/2007-09/msg03557.html>

Probably is a mirror sync problem. The last Fedora php package is 5.2.4-1.fc7,

<http://lwn.net/Articles/250513/>

but on many mirror (download.fedora.redhat.com for example :-|) this package not there is.

Okay i ended up in google search but all mirrors showed up with the 5.2.4-1 packages are all 404.
So i did take a look on rawhide and there where 5.2.4-2 packages.
I did --enablerepo=development and i got finally php-gd

Installing:

php-gd i386 5.2.4-2 development 111 k

Updating:

gd i386 2.0.35-1.fc8 development 158 k

Updating for dependencies:

glibc i686 2.6.90-15 development 5.4 M

glibc-common i386 2.6.90-15 development 18 M

glibc-devel i386 2.6.90-15 development 2.0 M

glibc-headers i386 2.6.90-15 development 605 k

php i386 5.2.4-2 development 1.3 M

php-cli i386 5.2.4-2 development 2.5 M

php-common i386 5.2.4-2 development 220 k

php-mbstring i386 5.2.4-2 development 1.1 M

php-mysql i386 5.2.4-2 development 80 k

php-pdo i386 5.2.4-2 development 59 k

I dont mind its development, i do now see gd generated images instead of red crosses :)

Re: php-gd dependency problem

Regards,
Danny.
