2007/9/30, antonio montagnani <antonio.montagnani@xxxxxxxxxx>:

After last updates,

- 1) I connect a card reader to USB port 1
- 2) I connect a USB disk to USB port 2
- 3) card reader is automatically unmounted and when I plug it again it is not automatically mounted (and it disappears also from lsusb devices list!!)

The same when I connect a second USB disk when another USB disk is connected.

Therefore I cannot copy anything from one USB device to another USB device. It was working fine in the past.

It is connected to latest kernel update, as for example with Linux Casa 2.6.22.5-76.fc7 it works fine.

I confirm that another PC with 2.6.22.5-76.fc7 is o.k.
