Well ... I wasn't expecting perfection. I just wanted to try livecd-creator out.

Another gotcha to watch out for:

https://bugzilla.redhat.com/show_bug.cgi?id=252182

Things can leak out of the chroot jail :-).

I am discovering that livecd-creator is not as bullet-proof as I thought. The one that I was trying created so many selinux avc's that selinux couldn't keep up, setroubleshoot crashed, my GUI desktop crashed and my /var/log/messages is about 26 MB bigger than it should be. I guess I will have to stick to the tried and true gold ks files and modify those for my purposes.
