On Tuesday 15 January 2008, Karl Larsen wrote:

All you wise guys who are thinking your smart look at this and tell me what is wrong with my yum.

```
GPG key retrieval failed: [Errno 5] OSError: [Errno 2] No such file or
directory: '/etc/pki/rpm-gpg/RPM-GPG-KEY-livna'
[root@localhost ~]#
```

Reinstall the livna-release rpm to get the key.

This is very bad indeed. I didn't recall vlc needing 41 rpm's

It needs more than that. It needs what the packager and buildsystem says it needs; and unless the packaging is very broken it really does need all of that.

But, on my fully updated F8 install, I just installed it successfully, and it need to add 13 RPM's to what I already had (my system already has all the other RPM's in your list of 41 installed; also, I actually have Skype working with pulseaudio installed, but that's because skype is set up to use my USB Plantronics headset directly) (and, since I don't need vlc, I'll be removing it afterwards):

```
[root@localhost ~]# yum install vlc
