Hello all,

I've got a certain vim script that handles projects.

E.g.

"project project_name" translates to:

```
"gvim "+set tags=list_of_tag_files" file1 file2 ... Makefile"
```

A. I want to add tags support. E.g.:

"project project_name +tag" translates to:

```
"gvim "+set tags=list_of_tag_files" file1 file2 ... Makefile -t tag"
```

However, I'm getting a "Too many edit arguments: "-t"" error.

What am I doing wrong?

B. I want to add open_file support. E.g.:

"project project_name -fileX" translates to:

```
"gvim "+set tags=list_of_tag_files" file1 file2 ... Makefile", jump to  
fileX
```

Can it be done?

– Gilboa
