Greetings,

I have an HP Pavilion 2000 series laptop, and generally Fedora 8 works very well on it. However, I have discovered that I cannot connect to an external screen projector. As far as I can tell, there is no way to obtain output of any kind to the VGA connector. The driver is `nv', and the graphics hardware is NVIDIA GeForce Go 6150. Apparently I cannot try an nvidia driver because I am running a 32-bit system on a 64-bit AMD processor (the Turion64x2), and there is only a 64-bit AMD version of the driver.

Huh? If you're running a 32bit OS, then you could and should install the 32bit driver.

Has anyone else encountered this problem?

no
