Having bought an ASUS EeePC (4 GB version), I soon discovered its native OS, Xandros, far more Windowy than I could stomach. So I tried several others, and had various troubles.

Having eventually discovered the Redhat Magazine discussion, entitled "Fedora + Eee PC = Eeedora" --- which is at <http://www.redhatmagazine.com/2008/02/14/fedora-eee-pc-eeedora/#comment-55444> --- I of course tried F8.

At present both F8 and Puppy 3.01eee are installed, booting, and running; but only the Puppy (from a USB stick, fwiw) can connect to the Net. Fedora fails, both wirelessly and with an ethernet cable.

To judge from much discussion of these and other attempts, the likeliest problem seems to be drivers, for eth0 and ath0.

Compiling is beyond me. Does anyone know if any pre-compiled drivers for F8 for this machine are available anywhere?

Have you tried eeedora?

<http://wiki.eeeuser.com/howto:eeedora>

Rahul

Among others, yes. Debian, Ubuntu, several Puppies, etc., etc. --- to where they're a blur now. All except F8 and the pup I mentioned have had difficulties I couldn't overcome; but all I remember of EeeDora was that it was of course the first --- not why I gave it up.

I'll try it again if I have to --- or maybe just connect an external CD drive to the EeePC yet again, put the eeedora CD into it, and

Re: F8 drivers for ASUS EeePC??

somehow copy a driver from eedora into fedora?? These installs do get tedious — and I *like* Fedora, just the way it is ...
