

selart detected a package upgrade

selart detected a package upgrade

-

I hit yes on a round of updates for F8 this morning, while installing was taking place I twice got the message box "selart detected a package upgrade, rebooting now" and a thirty second countdown. This didn't strike me as great since the system was still halfway through restarting packages (it's also abysmally short if I had been doing something else).

Does anyone know why this should have started happening now?
