Seems VERY sluggish, the Gnome Desktop
takes forever to start, and most

If only the starting is very sluggish, try running either
`fc-cache -f`
or (if you have a new enough version):
`fc-cache -r`
as root and under your normal user account

I can't find any documentation. What does the `fc` command do? Or where
is it documented?

`fc-cache` is part of `fontconfig`. `Fontconfig` handles all the fonts. It
uses caches otherwise every app will take 30secs to startup due to
`fontconfig` being busy reading the fonts.

Another solution I've seen is to make sure that `127.0.0.1 localhost` is
in your `/etc/hosts` file... maybe the desktop is doing hostname lookups
and timing out or something.
