Running Centos 4.4 on my HP notebook.

Where do I find the bluetooth utils on my system?

what are you looking for - bluez-utils-2.10-2.1 ?

I have those, all command line, and I am still figuring them out. Can set up a connection to my IOGear mouse, but don't have it working yet....

Then I have my stereo headset and TREO 650 to set up.

I have installed the bluez stuff. Or at least I get:

```
rpm -qa|grep blue
bluez-libs-2.10-2
bluez-utils-2.10-2.1
bluez-pin-0.23-3
bluez-hcidump-1.11-1
bluez-bluefw-1.0-6
```
